

## Earth Trek fits tape dispenser with four USB ports

After careful observation of people's habits, Earth Trek's design teams have devised a tape dispenser equipped with a 4-port USB hub. This combination of office stationery and computer technology highlights multi-functionality as a prevailing product feature.

In order to add value to general office equipment, the tape dispenser integrates three independent rotary USB hubs. This design makes the item suitable for both left- and right-hand users.

People will also be able to tidy up cables by using these three rear rotating ports, available at one point of access. Users will not merely regard this dispenser as general stationery; it also matches the pursuit of perfection and trendy design. At the front of the tape dispenser, there is also one USB port for quick access, for example, when using a USB flash disk. The whole design concept provides a high level of flexibility to users. Earth Trek wanted to create an item of commercial value, and this product suits both the retail segment as well as the needs of the gift and premium sector.

The appearance of this tape dispenser will attract the attention of customers, while the large logo imprint area will be welcomed by companies wanting to promote their business with this ideal gift item. The design concept looks simple, but it will be a surprise to everyone!

## Anpson adds DV3601 to photobank lineup

Anpson is a professional manufacturer of photobank products, and after several months of development, the company is now releasing its DV3601 photobank. As an upgraded version of the Digimate V, the DV3601 is equipped with a 3.6-inch TFT-LCD panel, plus an anti-abrasion and shockproof stainless steel shell. DV3601 also adds functions such as AV out and remote control. In addition, the new product has a 2400mAh battery, and it can run for 16 hours of MP3 playback or 8 hours without a hard drive installed.

Although a portable storage device, DV3601 is more like a PMP. Users can back up files from various kinds of memory cards but also view photos and images, play MP3 files and watch video directly on the device. The DV3601 supports 10 memory card formats currently in the market (CF I/CF II, MD, MMC, RS-MMC, MS, MS-Pro, SD, MS Duo, XD). It is compatible with 2.5-inch hard disks of capacity 10GB to 160GB, regardless of the speed of the drive. File management functions include copying, pasting and deleting. As well, users can copy three files or even one folder once. For the photo-viewer function, DV3601 supports files in the JPEG file format, plus slideshow browsing, zooming and more. The huge storage capacity, portability and compact size enables it to be your ideal digital partner.

## To Hong supplies Minicube products and more

To Hong International, established in 1996, is a group enterprise providing chains of advanced scientific and technological products. The two companies Mini Tech Net Science Technology Company Ltd. and Winfirst Company Ltd. are subsidiaries of To Hong International. Their business ranges from advanced technology chemistry and the manufacture of personal computers (PCs) to the management and service of high scientific and technological product chains, including the manufacture and sale of consumer oriented IT products of their own brand. The To Hong group enterprise also operates as a set of agencies for branded IT products, over an area that includes Hong Kong, Taiwan, Singapore, Malaysia and other countries in Southeast Asia. To Hong is able to offer its own brand, "Minicube," notebook PCs and accessory products. The name "Minicube" means "unlimited messages," and that sense of unlimited capability is derived from the observation, within the field of IT, that as systems become ever smaller in size, their processing power and capabilities only continue to increase.

The EL 80 is an excellent example of a Minicube system. It uses the Intel Core2 Duo processor, while it also has its own video card and large storage capacity. The EL 80 also has an accurate fingerprint recognition system.

## FORYOU launches 7inch-wide LCD Touchscreen monitor

Ideal for car media systems, the new seven-inch wide Touchscreen in-dash monitor from the FORYOU Group supports slide and angle adjustment and DVD, VCD, MP3, CD, WMA, JPEG, MP4 playback. All functions can be accessed by Touchscreen control via OSD.

Built-in functions include an AM/FM tuner and a television tuner with powered true diversity antenna. You can also connect a rear-view camera to display what's behind the vehicle and link up to display GPS navigation systems.

The TFT LCD Touch Screen is continuously adjustable from 50 degrees to 11 degrees. Display adjustments include brightness, contrast, color and hue.

The audio system supports 45W x 4 Max power output and also can connect to six speaker pre-outs, including Front, Rear, Center and Subwoofer. Additional processing include Dolby Pro Logic II decoder and Dolby 5.1 digital features.

Established in 1993, the China-based FORYOU Group is located in Huizhou in Guangdong province. The conglomerate is engaged in the development of precision components, mobile entertainment products, optical and chemical new materials, and medical instruments.
