Here's an interesting accessory, every gadget freak should consider getting. The Earth Trek 4-in-1 mobile stand is a multi purpose device that can be used for charging a mobile phone or connecting the device in question (which actually doesn't have to be a mobile phone) with a PC. In addition, it acts as a three-way USB hub and as card reader, supporting all popular flash card formats.

And while this is a great addition to every gadget lovin' desk, there's one thing we don't quite understand - how mobile phones stick on this baby? Good ol' love may not work this time and using a magnet may interfere with your memories, though I'm not sure that's the case with flash-based cards as well. To make things even harder-to-believe, image above displays a perfectly still mobile phone in a moment of charging. Go figure.

Earth Trek 4-in-1 mobile stand is available in either white or black at a still undisclosed price. Earth Trek's [website](#) has more information about it, but it requires an email address for accessing the product info page...
