If you ever wanted a mouse and a USB hub wrapped in leather you are in luck. **Earth-Trek** is banking on the fact that you just can't live without their bovine clad USB gear. The hub has four USB ports and the mouse appears to be a three button design using a scroll wheel. There is no word on the specs of the mouse at this time, but you could expect something that small to be optical with most likely an 800 dpi resolution. The leather used looks pretty nice in the textured brown or the simple black. I will say that the brown mouse looks a bit feminine to me; I could see my wife whipping that out of her purse to touch up her make up or something.
